## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 9 and 10 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Noda et al (US 5,900,379).

Noda discloses a test kit comprising a lateral flow device having a section that is removable. The removable section comprises a capture region where immobilized antibodies are used to capture an analyte. See column 5, lines 35-44, and column 11, example 1.

3. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Mazar et al (US 6,277,818 B1).

Mazar discloses a method for isolating or enriching uPAR-expressing cells from a cell mixture, comprising: contacting the cell mixture with a binding compound that is bound to a solid support such as a resin, flat sheet, test strip, etc; separating cells from the ligand thereby

Art Unit: 1641

enriching or isolating the cells. See column 7, lines 8-26; column 22, line 41 through column 23, lines 24. Mazar also discloses further enriching the cells by plating and growing in appropriate medium.

4. Claims 1-4 and 7-10 are rejected under 35 U.S.C. 102(e) as being anticipated by LaBorde (US 6,607,922).

LaBorde discloses an immunochromatographic assay using superparamagnetic beads or particles coupled with antibodies to capture analytes in a sample. The particles are disposed on a test strip that can be removed from a support member for archival or analysis by appropriate means. See column 2, lines 5-15; column 3, lines 13-30; and column 4, lines 13-17.

Even though LaBorde does not specifically teach a test kit comprising such a device; LaBorde anticipates the instant kit claim because it is nothing more than the device itself with no additional components.

### *Conclusion*

5. No claim is allowed.
